CONTENTS

FOREWORD	1
OVERVIEW	3
CHAPTER 1: MISSIONS, HISTORY AND FUNDAMENTALS OF SPACE NUCLEAR FISSION SYSTEMS.....	11
Potential Mission Power Needs	11
Summary of Past Programs	14
Fundamentals of Space Nuclear Fission Systems	17
Fundamentals of Nuclear Reactors	18
Reactor Elements	18
The Fission Process	21
Electric Power Generation	23
Static Power Generators.....	23
Thermoelectric Power Conversion	23
Thermionic Converter Principles	26
Dynamic Power Conversion Generators.....	32
Principles of Dynamic Thermal-to-Electric Conversion Cycles	32
Brayton Cycle Principles	35
Rankine Cycle Principles	38
Principles of Stirling Cycles.....	41
Heat Transport.....	44
Pumped-Loops.....	44
Heat Pipes	49
Heat Rejection Subsystem.....	50
Shielding	51
CHAPTER 2: DESIGN REQUIREMENTS.....	59
Mission Requirements	59
Safety.....	66
Protection Against Inadvertent Criticality.....	67
Protection Against Radiological Hazards	68
Safety Issues Relative to Orbit Lifetimes.....	72
Safety Issues Relative to Space Debris	72
Cost, Schedule and Development Risk.....	73
CHAPTER 3: URANIUM-ZIRCONIUM-HYDRIDE REACTOR POWER PLANTS	75
SNAP-2A.....	75
SNAP-10A.....	81
Design	81
SNAP-10A Flight Demonstration	86
SNAP-8	88
Summary of U-ZrH Reactor Power Plant Development	97
CHAPTER 4: SP-100.....	101
Design Requirements.....	101
Power Plant Description.....	101
Performance and Scaleability	108
Development Status.....	112
Flight Safety	115
Flight Readiness	119
System Level.....	119
Reactor Subsystem.....	119
Reactor Instrumentation And Controls Subsystem	120
Shield Subsystem	121
Heat Transport Subsystem	121

Converter Subsystem	121
Heat Rejection Subsystem	121
Design Growth-Using Stirling Engine Development.....	121
Summary	123
CHAPTER 5: THERMIONIC REACTOR POWER PLANTS.....	125
Earlier Developments.....	125
Thermionic Developments From 1983-1994, Including The Fuel Element (TFE) Verification Program ...	135
System Concept	135
Technology Developments	138
Forty Kilowatt Thermionic Power Systems Program	139
S-Prime Thermionic Nuclear Power System	140
Space Power Advanced Core-Length Element-Reactor (SPACE-R) Power System.....	142
Space Thermionic Advanced Reactor-Compact (STAR-C).....	145
Summary	146
CHAPTER 6: RUSSIAN SPACE NUCLEAR POWER SYSTEMS	147
Overview	147
Romashka Thermoelectric Power Reactors	149
Design Features	149
Flight Safety Considerations For RORSAT Satellites.....	151
Topaz I Reactor Power Plants	156
Design Features	156
Flight Operations	159
Topaz II Reactor Power Plant	160
Design Features	160
Safety	164
Flight Readiness.....	167
Russian Flight System Approach	167
Summary	169
CHAPTER 7: PROJECT PROMETHEUS, GAS-COOLED REACTOR POWER SYSTEM	171
Design Concept.....	172
Configuration Reliability	178
Program Status At Termination	186
CHAPTER 8: FISSION SURFACE POWER (FSP)	187
Introduction.....	187
Requirements	188
FSP Conceptual Design	189
Reactor Module	193
Power Conversion Module	196
Heat Rejection Module	200
System Mass	201
Development Status	202
Reactor Module Technology Development.....	203
Power Conversion Module Technology Development.....	204
Heat Rejection Module Development.....	205
Summary	205
CHAPTER 9: ALTERNATE SPACE REACTOR CONCEPTS	207
Rankine Cycle Liquid Metal Fast Reactors	207
Medium-Power Reactor Experiment (MPRE).....	213
High-Temperature, Gas-Cooled Electric Power Reactor (710 Program).....	218
Advanced Space Nuclear Power Program (SPR).....	222
Heat Pipe Power Plant (SPAR/SP-100).....	229
Multi-Megawatt Program.....	243
Bimodal Systems.....	247

CHAPTER 10: WHERE WE ARE AND VISIONS OF THE FUTURE 251
Power Plant Design Characteristics..... 251
Technology Status 254
Reactor Fuels..... 254
 Uranium Nitride Fuel Development Status..... 255
 Uranium Oxide Fuels..... 258
Reactor Components 259
Converter Systems 260
Heat Rejection Radiators..... 262
System Designs 262
Visions of the Future 263

NOTES..... 267
